Trouble Shooting Guide

When the tape deck fails to function properly, check following conditions first, then examine it according to the check list below.

- Are all connections correct?

- Is this unit properly used as instructed in the manual?
- Is there any trouble on speakers and amplifiers?

Symptom	Causes	Remedy
• Tape does not run.	<ul style="list-style-type: none"> No power supplied. Cassette door is not properly closed. PAUSE switch was touched and the deck is in pause mode. Tape end is reached. 	<ul style="list-style-type: none"> Check AC supply cord and POWER switch. Push EJECT knob to check cassette loading and close the cassette door again. Release the pause mode. Rewind the tape or turn the cassette over.
• During rewind, the tape stops or goes into playback.	• MEMORY EXECUTION switch is ON.	• Set MEMORY EXECUTION switch to OFF.
• Recording is not possible.	<ul style="list-style-type: none"> Tabs for prevention of accidental erasure have been removed. Connections are improper. Heads are dirty. 	<ul style="list-style-type: none"> Cover the tab openings with a piece of adhesive tape. Check connections. Perform head cleaning.
• No playback sound.	<ul style="list-style-type: none"> During playback, MONITOR switch is set to SOURCE. OUTPUT LEVEL control is set to minimum. During recording and pause mode, MONITOR switch is set to TAPE. 	<ul style="list-style-type: none"> Set MONITOR switch to TAPE. Adjust for proper level. Set MONITOR switch to SOURCE.
• Recording or playback operation starts automatically when power is switched on.	• TIMER switch is not set to OFF.	• Set TIMER switch to OFF.
• Input signal does not come in the deck when recording.	<ul style="list-style-type: none"> REC LEVEL controls are set to minimum. Connections between AL-85 and stereo system are incorrect. 	<ul style="list-style-type: none"> Adjust for proper level. Check connections and cords.
• Playback sound is husky or left/right sound balance is instable.	<ul style="list-style-type: none"> Heads are dirty. Tape is stretched or warped. 	<ul style="list-style-type: none"> Perform head cleaning. Use another tape.
• Excessive tape hiss.	<ul style="list-style-type: none"> Heads are magnetized. Inferior tape with high hiss noise is used. Heads are dirty. Setting of DOLBY NR select switch is unsuitable. Recording level is too low. MIC level controls are not set to minimum in recording from LINE IN. 	<ul style="list-style-type: none"> Perform head demagnetizing. Replace the tape. Perform head cleaning. Set the switch to a correct position. Adjust for proper level. Set MIC level controls to minimum.

Symptom	Causes	Remedy
• Sound is distorted.	• Recorded sound on the tape itself is distorted. • Recording level is too high. • TAPE SELECT switch is not set to correct position in recording.	• Check by listening to another tape. • Adjust for proper level. • Set TAPE SELECT switch to correct position.
• Wow/flutter is excessive and sound intermittent.	• Heads, pinch rollers and capstans are dirty. • Tape is wound too tightly or unevenly.	• Perform cleaning of heads and tape transport part. • Wind the tape with fast forward or rewind.
• Loud hum noise is heard during playback.	• Connection cords are not plugged in correctly. • External leakage flux (in inductive fields from amplifier power transformer, etc.) occurs. • Heads are dirty.	• Securely plug in all cords. • Remove inductive sources such as fluorescent lamps, amplifiers, transformers, etc. from the vicinity of the deck. • Perform head cleaning.
• High tone is excessively enhanced.	• DOLBY NR system is not engaged properly. • TAPE SELECT switch is set incorrectly.	• DOLBY NR system as was used in recording must be employed for playback. • Set TAPE SELECT switch to suitable position.
• High tone is weak.	• Heads are dirty. • TAPE SELECT switch is set incorrectly. • Dolby NR system is engaged for playback of a tape which was not recorded with Dolby NR system.	• Perform head cleaning. • Set TAPE SELECT switch to suitable position. • Set DOLBY NR select switch to OFF.
• Only timer playback is effective even if the deck is set up for timer recording.	• Tabs for prevention of accidental erasure have been removed.	• Cover the tab openings with a piece of adhesive tape.
• Calibration adjustment is impossible.	• TAPE SELECT switch is set to incorrect position. • Extremely worn-out tape is used. • Heads are dirty.	• Set TAPE SELECT switch to suitable position. • Use the another cassette tape. • Perform head cleaning.
• Counter memory operation can not be performed.	• MEMORY EXECUTION switch is set to OFF.	• Set MEMORY EXECUTION switch to ON.
• TIMER counter does not give correct readings.	• Setting of FREQUENCY select switch is wrong.	• Turn off POWER switch and then set FREQUENCY select switch to the correct position.
